8. When we say, as Webster says, 'The definition of horse is 'A hoofed quadruped of the genus Equus,' we may, in fact, mean three different things. (1) We may mean merely 'When I say 'horse,' you are to understand that I am talking about a hoofed quadruped of the genus Equus.' This might be called the arbitrary verbal definition: and I do not mean that good is indefinable in that sense. (2) We may mean, as Webster ought to mean: 'When most English people say 'horse,' they mean a hoofed quadruped of the genus Equus.' This may be called the verbal definition proper, and I do not say that good is indefinable in this sense either; for it is certainly possible to discover how people use a word: otherwise, we could never have known that 'good' may be translated by 'gut' in German and by 'bon' in French. But (3) we may, when we define horse, mean something much more important. We may mean that a certain object, which we all of us know, is composed in a certain manner: that it has four legs, a head, a heart, a liver, etc., etc., all of them arranged in definite relations to one another. It is in this sense that I deny good to be definable. I say that it is not composed of any parts, which we can substitute for it in our minds when we are thinking of it. We might think just as clearly and correctly about a horse, if we thought of all its parts and their arrangement instead of thinking of the whole: we could, I say, think how a horse differed from a donkey just as well, just as truly, in this way, as now we do, only not so easily; but there is nothing whatsoever which we could substitute for good; and that is what I mean, when I say that good is indefinable.

9. But I am afraid I have still not removed the chief difficulty which may prevent acceptance of the proposition that good is indefinable. I do not mean to say that *the* good, that which is good, is thus indefinable; if I did think so, I should not be writing on Ethics, for my main object is to help towards discovering that definition. It is just because I think there will be less risk of error in our search for a definition of 'the good,' that I am now insisting that *good* is indefinable. I must try to explain the difference between these two. I suppose it may be granted that 'good' is an adjective. Well, 'the good,' 'that which is good,' must therefore be the substantive to which the

9

adjective 'good' will apply: it must be the whole of that to which the adjective will apply, and the adjective must *always* truly apply to it. But if it is that to which the adjective will apply, it must be something different from that adjective itself; and the whole of that something different, whatever it is, will be our definition of *the* good. Now it may be that this something will have other adjectives, beside 'good,' that will apply to it. It may be full of pleasure, for example; it may be intelligent; and if those two adjectives are really part of its definition, then it will certainly be true, that pleasure and intelligence are good. And many people appear to think that, if we say 'Pleasure and intelligence are good,' or if we say 'Only pleasure and intelligence are good,' we are defining 'good.' Well, I cannot deny that propositions of this nature may sometimes be called definitions; I do not know well enough how the word is generally used to decide upon this point. I only wish it to be understood that that is not what I mean when I say there is no possible definition of good, and that I shall not mean this if I use the word again. I do most fully believe that some true proposition of the form 'Intelligence is good and intelligence alone is good' can be found; if none could be found, our definition of *the* good would be impossible. As it is, I believe *the* good to be definable; and yet I still say that good itself is undefinable.

Chapter I.  
The Subject-matter of Ethics.

...

9

10. 'Good,' then, if we mean by it that quality which we assert to belong to a thing, when we say that the thing is good, is incapable of any definition, in the most important sense of that word. The most important sense of 'definition' is that in which a definition states what are the parts which invariably compose a certain whole; and in this sense 'good' has no definition because it is simple and has no parts. It is one of those innumerable objects of thought which are themselves incapable of definition, because they are the ultimate terms of reference to which whatever *is* capable of definition must be defined. That there must be an indefinite number of such terms is obvious, on reflection; since we cannot define anything except by an analysis, which, when carried as far as it will go, refers us to something, which is simply different from anything else, and which by that ultimate difference explains the peculiarity of the whole which we are defining: for every whole contains some parts which are common to other wholes also. There is, therefore, no intrinsic difficulty in the contention that 'good' denotes a simple and indefinable quality. There are many other instances of such qualities. 10

Consider yellow, for example. We may try to define it, by describing its physical equivalent; we may state what kind of light-vibrations must stimulate the normal eye, in order that we may perceive it. But a moment's reflection is sufficient to shew that those light-vibrations are not themselves what we mean by yellow. *They* are not what we perceive. Indeed, we should never have been able to discover their existence, unless we had first been struck by the patent difference of quality between the different colours. The most we can be entitled to say of those vibrations is that they are what corresponds in space to the yellow which we actually perceive.

Yet a mistake of this simple kind has commonly been made about 'good.' It may be true that all things which are good are *also* something else, just as it is true that all things which are yellow produce a certain kind of vibration in the light. And it is a fact, that Ethics aims at discovering what are those other properties belonging to all things which are good. But far too many philosophers have thought that when they named those other properties they were actually defining good; that these properties, in fact, were simply not 'other,' but abso-

lutely and entirely the same with goodness. This view I propose to call the 'naturalistic fallacy' and of it I shall now endeavour to dispose.

11. Let us consider what it is such philosophers say. And first it is to be noticed that they do not agree among themselves. They not only say that they are right as to what good is, but they endeavour to prove that other people who say that it is something else, are wrong. One, for instance, will affirm that good is pleasure, another, perhaps, that good is that which is desired; and each of these will argue eagerly to prove that other people who say that it is something else, are wrong. One, for instance, will affirm that good is pleasure, another, perhaps, that good is that which is desired; and each of these will argue eagerly to prove that the other is wrong. But how is that possible? One of them says that good is nothing but the object of desire, and at the same time tries to prove that it is not pleasure. But from his first assertion, that good just means the object of desire, one of two things must follow as regards his proof:

(1) He may be trying to prove that the object of desire is not pleasure. But, if this be all, where is his Ethics? The position he is maintaining is merely a psychological one. Desire is something which occurs in our minds, and pleasure is something else which so occurs; and our would-be ethical philosopher is merely holding that the latter is not the object of the former. But what has that to do with the question in dispute? His opponent held the ethical proposition that pleasure was the good, and although he should prove a million times over the psychological proposition that pleasure is not the object of desire, he is no nearer proving his opponent to be wrong. The position is like this. One man says a triangle is a circle: another replies, 'A triangle is a straight line, and I will prove to you that I am right: *for*' (this is the only argument) 'a straight line is not a circle.' 'That is quite true,' the other may reply; 'but nevertheless a triangle is a circle, and you have said nothing whatever to prove the contrary. What is proved is that one of us is wrong, for we agree that a triangle cannot be both a straight line and a circle: but which is wrong, there can be no earthly means of proving, since you define triangle as straight line and I define it as circle.' — Well, that is one alternative which any naturalistic Ethics has to face; if good is *defined* as something else, then it is impossible either to prove that any other definition is wrong or even to deny such definition.

(2) The other alternative will scarcely be more welcome. It is that the discussion is after all a verbal one. When A says 'Good means pleasant' and B says 'Good means desired,' they may merely wish to assert that most people have used the word for what is pleasant and for what is desired respectively. And this is quite an interesting subject for discussion: only it is not a whit more an ethical discussion than the last was. Nor do I think that any exponent of naturalistic

Ethics would be willing to allow that this was all he meant. They are all so anxious to persuade us that what they call the good is what we really ought to do. 'Do, pray, act so, because the word 'good' is generally used to denote actions of this nature': such, on this view, would be the substance of their teaching. And in so far as they tell us how we ought to act, their teaching is truly ethical, as they mean it to be. But how perfectly absurd is the reason they would give for it! 'You are to do this, because most people use a certain word to denote conduct such as this.' 'You are to say the thing which is not, because most people call it lying.' That is an argument just as good!—My dear sirs, what we want to know from you as ethical teachers, is not how people use a word; it is not even, what kind of actions they approve, which the use of this word 'good' may certainly imply: what we want to know is simply what *is* good. We may indeed agree that what most people do think good, is actually so; we shall at all events be glad to know their opinions: but when we say that their opinions about what *is* good, we do mean what we say; we do not care whether they call that thing 'horse' or 'table' or 'chair,' 'gut' or 'bon' or 'ἀγαθός'; we want to know what it is that they so call. When they say 'Pleasure is good,' we cannot believe that they merely mean 'Pleasure is pleasure' and nothing more than that.

12. Suppose a man says 'I am pleased'; and suppose it is not a lie or a mistake but the truth. Well, if it is true, what does that mean? It means that his mind, a certain definite mind, distinguished by certain definite marks from all others has at this moment a certain definite feeling called pleasure. 'Pleased' *means* nothing but having pleasure, and though we may be more pleased or less pleased, and even, we may admit for the present, have one or another kind of pleasure; yet in so far as it is pleasure we have, whether there be more or less of it, and whether it be of one kind or another, what we have is one definite thing, absolutely indefinable, some one thing that is the same in all the various degrees and in all the various kinds of it that there may be. We may be able to say how it is related to other things: that, for example, it is in the mind, that it causes desire, that we are conscious of it, etc., etc. We can, I say, describe its relations to other things, but define it we can *not*. And if anybody tried to define pleasure for us as being any other natural object; if anybody were to say, for instance, that pleasure *means* the sensation of red, and were to proceed to deduce from that that pleasure is a colour, we should be entitled to laugh at him and to distrust his future statements about pleasure. Well, that would be the same fallacy which I have called the naturalistic fallacy. That 'pleased' does not mean 'having the sensation of red,' or anything else whatever, does not prevent us from understanding what it does mean. It is enough for us to know that 'pleased' does mean 'having the sensation of pleasure,' and though pleasure is absolutely indefinable, though pleasure is pleasure and

13

nothing else whatever, yet we feel no difficulty in saying that we are pleased. The reason is, of course, that when I say 'I am pleased,' I do not mean that 'I' am the same thing as 'having pleasure.' And similarly no difficulty need be found in my saying that 'pleasure is good' and yet not meaning that 'pleasure' is the same thing as 'good,' that pleasure *means* good, and that good *means* pleasure. If I were to imagine that when I said 'I am pleased,' I meant that I was exactly the same thing as 'pleased,' I should not indeed call that a naturalistic fallacy, although it would be the same fallacy as I have called naturalistic with reference to Ethics. The reason of this is obvious enough. When a man confuses two natural objects with one another, defining the one by the other, if for instance, he confuses himself, who is one natural object, with 'pleased' or with 'pleasure' which are others, then there is no reason to call the fallacy naturalistic. But if he confuses 'good,' which is not in the same sense a natural object, with any natural object whatever, then there is a reason for calling that a naturalistic fallacy; its being made with regard to 'good' marks it as something quite specific, and this specific mistake deserves a name because it is so common. As for the reasons why good is not to be considered a natural object, they may be reserved for discussion in another place. But, for the present, it is sufficient to notice this: Even if it were a natural object, that would not alter the nature of the fallacy nor diminish its importance one whit. All that I have said about it would remain quite equally true: only the name which I have called it would not be so appropriate as I think it is. And I do not care about the name: what I do care about is the fallacy. It does not matter what we call it, provided we recognise it when we meet with it. It is to be met with in almost every book on Ethics; and yet it is not recognised: and that is why it is necessary to multiply illustrations of it, and convenient to give it a name. It is a very simple fallacy indeed. When we say that an orange is yellow, we do not think our statement binds us to hold that 'orange' means nothing else than 'yellow,' or that nothing can be yellow but an orange. Supposing the orange is also sweet! Does that bind us to say that 'sweet' is exactly the same thing as 'yellow,' that 'sweet' must be defined as 'yellow'? And supposing it be recognised that 'yellow' just means 'yellow' and nothing else whatever, does that make it any more difficult to hold that oranges are yellow? Most certainly it does not: on the contrary, it would be absolutely meaningless to say that oranges were yellow unless yellow did in the end mean just 'yellow' and nothing else whatever — unless it was absolutely undefinable. We should not get any very clear notion about things, which are yellow — we should not get very far with our science, if we were bound to hold that everything which was yellow, *meant* exactly the same thing as yellow. We should find we had to hold that an orange was exactly the same thing as a stool, a piece of paper, a lemon, anything you like. We could prove any num-

14

ber of absurdities; but should we be the nearer to the truth? Why, then, should it be different with 'good'? Why, if good is good and indefinable, should I be held to deny that pleasure is good? Is there any difficulty in holding both to be true at once? On the contrary, there is no meaning in saying that pleasure is good, unless good is something different from pleasure. It is absolutely useless, so far as Ethics is concerned, to prove, as Mr Spencer tries to do, that increase of pleasure coincides with increase of life, unless good *means* something different from either life or pleasure. He might just as well try to prove that an orange is yellow by shewing that it is always wrapped up in paper. 15

**13.** In fact, if it is not the case that 'good' denotes something simple and indefinable, only two alternatives are possible: either it is a complex, a given whole, about the correct analysis of which there could be disagreement; or else it means nothing at all, and there is no such subject as Ethics. In general, however, ethical philosophers have attempted to define good, without recognising what such an attempt must mean. They actually use arguments which involve one or both of the absurdities considered in § 11. We are, therefore, justified in concluding that the attempt to define good is chiefly due to want of clearness as to the possible nature of definition. There are, in fact, only two serious alternatives to be considered, in order to establish the conclusion that 'good' does denote a simple and indefinable notion. It might possibly denote a complex, as 'horse' does; or it might have no meaning at all. Neither of these possibilities has, however, been clearly conceived and seriously maintained, as such, by those who presume to define good; and both may be dismissed by a simple appeal to facts.

(1) The hypothesis that disagreement about the meaning of good is disagreement with regard to the correct analysis of a given whole, may be most plainly seen to be incorrect by consideration of the fact that, whatever definition may be offered, it may always, be asked, with significance, of the complex so defined, whether it is itself good. To take, for instance, one of the more plausible, because one of the more complicated of such proposed definitions, it may easily be thought, at first sight, that to be good may mean to be that which we desire to desire. Thus if we apply this definition to a particular instance and say 'When we think that A is good, we are thinking that A is one of the things which we desire to desire,' our proposition may seem quite plausible. But, if we carry the investigation further, and ask ourselves 'Is it good to desire to desire A?' it is apparent, on a little reflection, that this question is itself as intelligible, as the original question, 'Is A good?'—that we are, in fact, now asking for exactly the same information about the desire to desire A, for which we formerly asked with regard to A itself. But it is also apparent that the meaning of this second question cannot be correctly analysed into 'Is 16

the desire to desire A one of the things which we desire to desire?': we have not before our minds anything so complicated as the question 'Do we desire to desire to desire to desire A?' Moreover any one can easily convince himself by inspection that the predicate of this proposition—'good'—is positively different from notion of 'desiring to desire' which enters into its subject: 'That we should desire to desire A is good' is *not* merely equivalent to 'That A should be good is good.' It may indeed be true that what we desire to desire is always good; perhaps, even the converse may be true: but it is very doubtful whether this is the case, and the mere fact that we understand very well what is meant by doubting it, shews clearly that we have to different notions before our mind.

(2) And the same consideration is sufficient to dismiss the hypothesis that 'good' has no meaning whatsoever. It is very natural to make the mistake of supposing that what is universally true is of such a nature that its negation would be self-contradictory: the importance which has been assigned to analytic propositions in the history of philosophy shews how easy such a mistake is. And thus it is very easy to conclude that what seems to be a universal ethical principle is in fact an identical proposition; that, if, for example, whatever is called 'good' seems to be pleasant, the proposition 'Pleasure is the good' does not assert a connection between two different notions, but involves only one, that of pleasure, which is easily recognised as a distinct entity. But whoever will attentively consider with himself what is actually before his mind when he asks the question 'Is pleasure (or whatever it may be) after all good?' can easily satisfy himself that he is not merely wondering whether pleasure is pleasant. And if he will try this experiment with each suggested definition in succession, he may become expert enough to recognise that in every case he has before his mind a unique object, with regard to the connection of which with any other object, a distinct question may be asked. Every one does in fact understand the question 'Is this good?' 17  
When he thinks of it, his state of mind is different from what it would be, were he asked 'Is this pleasant, or desired, or approved?' It has a distinct meaning for him, even though he may not recognise in what respect it is distinct. Whenever he thinks of 'intrinsic value,' or 'intrinsic worth,' or says that a thing 'ought to exist,' he has before his mind the unique object—the unique property of things—that I mean by 'good.' Everybody is constantly aware of this notion, although he may never become aware at all that it is different from other notions of which he is also aware. But, for correct ethical reasoning, it is extremely important that he should become aware of this fact; and as soon as the nature of the problem is closely understood, there should be little difficulty in advancing so far in analysis.

14. 'Good,' then, is indefinable; and yet, so far as I know, there is only one ethical writer, Prof. Henry Sidgwick, who has clearly recog-

nised and stated this fact. We shall see, indeed, how far many of the most reputed ethical systems fall short of drawing the conclusions which follow from such a recognition. At present I will only quote from one instance, which will serve to illustrate the meaning and importance of this principle that 'good' is indefinable, or, as Prof. Sidgwick says, an 'unanalysable notion.' It is an instance to which Prof. Sidgwick himself refers in a note on the passage, in which he argues that 'ought' is unanalysable<sup>1</sup>.

<sup>1</sup> *Methods of Ethics*, Bk. I, Chap. iii, § 1 (6th edition).

'Bentham,' says Sidgwick, 'explains that his fundamental principle 'states the greatest happiness of all those whose interest is in question as being the right and proper end of human action''; and yet 'his language in other passages of the same chapter would seem to imply' that he *means* by the word 'right' 'conducive to the general happiness.' Prof. Sidgwick sees that, if you take these two statements together, you get the absurd result that 'greatest happiness is the end of human action, which is conducive to the general happiness'; and so absurd does it seem to him to call this result, as Bentham calls it, 'the fundamental principle of a moral system,' that he suggests that Bentham cannot have meant it. Yet Prof. Sidgwick himself states 18 elsewhere<sup>1</sup> that Psychological Hedonism is 'not seldom confounded with Egoistic Hedonism'; and that confusion, as we shall see, rests chiefly on that same fallacy, the naturalistic fallacy, which is implied in Bentham's statements. Prof. Sidgwick admits therefore that this fallacy is sometimes committed, absurd as it is; and I am inclined to think that Bentham may really have been one of those who committed it. Mill, as we shall see, certainly did commit it. In any case, whether Bentham committed it or not, his doctrine, as above quoted, will serve as a very good illustration of this fallacy, and of the importance of the contrary proposition that good is indefinable.

<sup>1</sup> *Methods of Ethics*, Bk. I, Chap. iv, § 1.

Let us consider this doctrine. Bentham seems to imply, so Prof. Sidgwick says, that the word 'right' *means* 'conducive to general happiness.' Now this, by itself, need not necessarily involve the naturalistic fallacy. For the word 'right' is very commonly appropriated to actions which lead to the attainment of what is good; which are regarded as *means* to the ideal and not as ends-in-themselves. This use of 'right', as denoting what is good as a means, whether or not it also be good as an end, is indeed the use to which I shall confine the word. Had Bentham been using 'right' in this sense, it might be perfectly consistent for him to *define* right as 'conducive to the general happiness' *provided only* (and note this proviso) he had already proved, or laid down as an axiom, that general happiness was *the* good, or (what is equivalent to this) that general happiness alone was good. For in that case he would have already defined *the* good as

general happiness (a position perfectly consistent, we have seen, with the contention that 'good' is indefinable), and, since right was to be defined as 'conducive to *the* good,' it would actually *mean* 'conducive to general happiness.' But this method of escape from the charge of having committed the naturalistic fallacy has been closed by Bentham himself. For his fundamental principle is, we see, that the greatest happiness of all concerned is the *right* and proper *end* of human action. He applies the word 'right,' therefore, to the end, as such, not only to the means which are conducive to it; and that being so, right can no longer be defined as 'conducive to the general happiness,' without involving the fallacy in question. For now it is obvious that the definition of right as conducive to general happiness can be used by him in support of the fundamental principle that general happiness is the right end; instead of being itself derived from that principle. If right, by definition, means conducive to general happiness, then it is obvious that general happiness is the right end. It is not necessary now first to prove or assert that general happiness is the right end, before right is defined as conducive to general happiness—a perfectly valid procedure; but on the contrary the definition of right as conducive to general happiness proves general happiness to be the right end—a perfectly invalid procedure, since in this case the statement that 'general happiness is the right end of human action' is not an ethical principle at all, but either, as we have seen, a proposition about the meaning of words, or else a proposition about the *nature* of general happiness, not about its rightness or its goodness. 19

Now, I do not wish the importance I assign to this fallacy to be misunderstood. The discovery of it does not at all refute Bentham's contention that greatest happiness is the proper end of human action, if that be understood as an ethical proposition, as he undoubtedly intended it. That principle may be true all the same; we shall consider whether it is so in the succeeding chapters. Bentham might have maintained it, as Prof. Sidgwick does, even if the fallacy had been pointed out to him. What I am maintaining is that the *reasons* which he actually gives for his ethical proposition are fallacious ones so far as they consist in a definition of right. What I suggest is that he did not perceive them to be fallacious; that, if he had done so, he would have been led to seek for other reasons in support of his Utilitarianism; and that, had he sought for other reasons, he *might* have found none which he thought to be sufficient. In that case he would have changed his whole system—a most important consequence. It is undoubtedly also possible that he would have thought other reasons to be sufficient, and in that case his ethical system, in its main results, would still have stood. But, even in this latter case, his use of the fallacy would be a serious objection to him as an ethical philosopher. For it is the business of Ethics, I must insist, not only to obtain true results, but also to find valid reasons for them. The direct object of 20

Ethics is knowledge and not practice; and any one who uses the naturalistic fallacy has certainly not fulfilled this first object, however correct his practical principles may be.

My objections to Naturalism are then, in the first place, that it offers no reason at all, far less any valid reason, for any ethical principle whatever; and in this it already fails to satisfy the requirements of Ethics, as a scientific study. But in the second place I contend that, though it gives a reason for no ethical principle, it is the *cause* of the acceptance of false principles—it deludes the mind into accepting ethical principles, which are false; and in this it is contrary to every aim of Ethics. It is easy to see that if we start with a definition of right conduct as conduct conducive to general happiness; then, knowing that right conduct is universally conduct conducive to the good, we very easily arrive at the result that the good is general happiness. If, on the other hand, we once recognise that we must start our Ethics without a definition, we shall be much more apt to look about us, before we adopt any ethical principle whatever, and the more we look about us, the less likely we are to adopt a false one. It may be replied to this: Yes, but we shall look about us just as much, before we settle on our definition, and are therefore just as likely to be right. But I will try to shew that this is not the case. If we start with the conviction that a definition of good can be found, we start with the conviction that the good *can mean* nothing else than some one property of things, and our only business will then be to discover what that property is. But if we recognise that, so far as the meaning of good goes, anything whatever may be good, we start with a much more open mind. Moreover, apart from the fact that, when we think we have a definition, we cannot logically defend our ethical principles in any way whatever, we shall also be much less apt to defend them well, even if illogically. For we shall start with the conviction that good must mean so and so, and shall therefore be inclined either to misunderstand our opponent's arguments or to cut them short with the reply, 'This is not an open question: the very meaning of the word decides it; no one can think otherwise except through confusion.'

21

...

23

...

17. There are, then, judgments which state that certain kinds of things have good effects; and such judgments, for the reasons just given, have the important characteristics (1) that they are unlikely to be true, if they state that the kind of thing in question *always* has good effects, and (2) that, even if they only state that it *generally* has

good effects, many of them will only be true of certain periods in the world's history. On the other hand there are judgments which state that certain kinds of things are themselves good; and these differ from the last in that, if true at all, they are all of them universally true. It is, therefore, extremely important to distinguish these two kinds of possible judgments. Both may be expressed in the same language: in both cases we commonly say 'Such and such a thing is good.' But in the one case 'good' will mean 'good as means,' i.e. merely that the thing is a means to good—will have good effects: in the other case it will mean 'good as end'—we shall be judging that the thing itself has the property which, in the first case, we asserted only to belong to its effects. It is plain that these are very different assertions to make about a thing; it is plain that either or both of them may be made, both truly and falsely, about all manner of things; and it is certain that unless we are clear as to which of the two we mean to assert, we shall have a very poor chance of deciding rightly whether our assertion is true or false. It is precisely this clearness as to the meaning of the question asked which has hitherto been almost entirely lacking in ethical speculation. Ethics has always been predominantly concerned with the investigation of a limited class of actions. With regard to these we may ask *both* how far they are good in themselves *and* how far they have a general tendency to produce good results. And the arguments brought forward in ethical discussion have always been of both classes—both such as would prove the conduct in question to be good in itself and such as would prove it to be good as a means. But that these are the only questions which any ethical discussion can have to settle, and that to settle the one is *not* the same thing as to settle the other—these two fundamental facts have in general escaped the notice of ethical philosophers. Ethical questions are commonly asked in an ambiguous form. It is asked 'What is a man's duty under these circumstances?' or 'Is it right to act this way?' or 'What ought we to aim at securing?' But all these questions are capable of further analysis; a correct answer to any of them involves both judgments of what is good in itself and causal judgments. This is implied even by those who maintain that we have a direct and immediate judgment of absolute rights and duties. Such a judgment can only mean that the course of action in question is *the* best thing to do; that, by acting so, every good that *can* be secured will have been secured. Now we are not concerned with the question whether such a judgment will ever be true. The question is: What does it imply, if it is true? And the only possible answer is that, whether true or false, it implies both a proposition as to the degree of goodness of the action in question, as compared with other things, and a number of causal propositions. For it cannot be denied that the action will have consequences: and to deny that the consequences matter is to make a judgment of their intrinsic value, as compared

with the action itself. In asserting that the action is *the* best thing to do, we assert that it together with its consequences presents a greater sum of intrinsic value than any possible alternative. And this condition may be realised by any of the three cases:—(a) If the action itself has greater intrinsic value than any alternative, whereas both its consequences and those of the alternatives are absolutely devoid either of intrinsic merit or intrinsic demerit; or (b) if, though its consequences are intrinsically bad, the balance of intrinsic value is greater than would be produced by any alternative; or (c) if, its consequences being intrinsically good, the degree of value belonging to them and it conjointly is greater than that of any alternative series. In short, to assert that a certain line of conduct is, at a given time, absolutely right or obligatory, is obviously to assert that more good or less evil will exist in the world, if it be adopted than if anything else be done instead. But this implies a judgment as to the value both of its own consequences and of those of any possible alternative. And that an action will have such and such consequences involves a number of causal judgments.

Similarly, in answering the question ‘What ought we to aim at securing?’ causal judgments are again involved, but in a somewhat different way. We are liable to forget, because it is so obvious, that this question can never be answered correctly except by naming something which *can* be secured. Not everything can be secured; and, even if we judge that nothing which cannot be obtained would be of equal value with that which can, the possibility of the latter, as well as its value, is essential to its being a proper end of action. Accordingly neither our judgments as to what actions we ought to perform, nor even our judgments as to the ends which they ought to produce, are pure judgments of intrinsic value. With regard to the former, an action which is absolutely obligatory *may* have no intrinsic value whatsoever; that it is perfectly virtuous may mean merely that it causes the best possible effects. And with regard to the latter, these best possible results which justify our action can, in any case, have only so much of intrinsic value as the laws of nature allow us to secure; and they in their turn *may* have no intrinsic value whatsoever, but may merely be a means to the attainment (in a still further future) of something that has such value. Whenever, therefore, we ask ‘What ought we to do?’ or ‘What ought we to try to get?’ we are asking questions which involve a correct answer to two others, completely different in kind from one another. We must know *both* what degree of intrinsic value different things have, *and* how these different things may be obtained. But the vast majority of questions which have actually been discussed in Ethics—*all* practical questions, indeed—involve this double knowledge; and they have been discussed without any clear separation of the two distinct questions involved. A great part of the vast disagreements prevalent in Ethics is to be attrib-

26

uted to this failure in analysis. By the use of conceptions which involve both that of intrinsic value and that of causal relation, as if they involved intrinsic value only, two different errors have been rendered almost universal. Either it is assumed that nothing has intrinsic value which is not possible, or else it is assumed that what is necessary must have intrinsic value. Hence the primary and peculiar business of Ethics, the determination of what things have intrinsic value and in what degrees, has received no adequate treatment at all. And on the other hand a *thorough* discussion of means has been also largely neglected, owing to an obscure perception of the truth that it is perfectly irrelevant to the question of intrinsic values. But however this may be, and however strongly any particular reader may be convinced that some one of the mutually contradictory systems which hold the field has a given correct answer either to the question what has intrinsic value, or to the question what we ought to do, or to both, it must at least be admitted that the questions what is best in itself and what will bring about the best possible, are utterly distinct; that both belong to the actual subject-matter of Ethics; and that the more clearly distinct questions are distinguished, the better is our chance of answering both correctly. 27

## Chapter VI. The Ideal.

...

187

112. The method which must be employed in order to decide the question 'What things have intrinsic value, and in what degrees?' has already been explained in Chap. III. (§§ 55, 57). In order to arrive at a correct decision on the first part of this question, it is necessary to consider what things are such that, if they existed *by themselves*, in absolute isolation, we should yet judge their existence to be good; and, in order to decide upon the relative *degrees* of value of different things, we must similarly consider what comparative value seems to attach to the isolated existence of each. By employing this method, we shall guard against two errors, which seem to have been the chief causes which have vitiated previous conclusions on the subject. The first of these is (1) that which consists in supposing that what seems absolutely necessary here and now, for the existence of anything good—what we cannot do without—is therefore good in itself. If we isolate such things, which are mere means to good, and suppose a world in which they alone, and nothing but they, existed, their intrinsic worthlessness becomes apparent. And, secondly, there is the more subtle error (2) which consists in neglecting the principle of organic

unities. This error is committed, when it is supposed, that, if one part of a whole has no intrinsic value, the value of the whole must reside entirely in the other parts. It has, in this way, been commonly supposed, that, if all valuable wholes could be seen to have one and only one common property, the wholes must be valuable solely *because* they possess this property; and the illusion is greatly strengthened, if the common property in question seems, considered by itself, to have more value than the other parts of such wholes, considered by themselves. But, if we consider the property in question, *in isolation*, and then compare it with the whole, of which it forms a part, it may become easily apparent that, existing by itself, the property in question has not nearly so much value, as has the whole to which it belongs. 188 Thus, if we compare the value of a certain amount of pleasure, *existing absolutely by itself*, with the value of certain 'enjoyments,' containing an equal amount of pleasure, it may become apparent that the 'enjoyment' is much better than the pleasure, and also, in some cases, much worse. In such a case it is plain that the 'enjoyment' does *not* owe its value *solely* to the pleasure it contains, although it might easily have appeared to do so, when we only considered the other constituents of the enjoyment, and seemed to see that, without the pleasure, they would have had no value. It is now apparent, on the contrary, that the whole 'enjoyment' owes its value quite equally to the presence of the other constituents, *even though* it may be true that the pleasure is the only constituent having any value by itself. And similarly, if we are told that all things owe their value solely to the fact that they are 'realisations of the true self,' we may easily refute this statement, by asking whether the predicate that is meant by 'realising the true self,' supposing that it could exist alone, would have any value whatsoever. Either the *thing*, which does 'realise the true self,' has intrinsic value or it has not; and if it has, then it certainly does not owe its value solely to the fact that it realises the true self.

**113.** If, now, we use this method of absolute isolation, and guard against these errors, it appears that the question we have to answer is far less difficult than the controversies of Ethics might have led us to expect. Indeed, once the meaning of the question is clearly understood, the answer to it, in its main outlines, appears to be so obvious, that it runs the risk of seeming to be a platitude. By far the most valuable things, which we know or can imagine, are certain states of consciousness, which may be roughly described as the pleasures of human intercourse and the enjoyment of beautiful objects. No one, probably, who has asked himself the question, has ever doubted that personal affection and the appreciation of what is beautiful in Art or Nature, are good in themselves; nor, if we consider strictly what things are worth having *purely for their own sakes*, does it appear probable that any one will think that anything else has *nearly* so great 189

a value as the things which are included under these two heads. I have myself urged in Chap. III. (§ 50) that the mere existence of what is beautiful does appear to have *some* intrinsic value; but I regard it as indubitable that Prof. Sidgwick was so far right, in the view there discussed, that such mere existence of what is beautiful has value, so small as to be negligible, in comparison with that which attaches to the *consciousness* of beauty. This simple truth may, indeed, be said to be universally recognised. What has *not* been recognised is that it is the ultimate and fundamental truth of Moral Philosophy. That it is only for the sake of these things—in order that as much of them as possible may at some time exist—that any one can be justified in performing any public or private duty; that they are the *raison d'être* of virtue; that it is they—these complex wholes *themselves*, and not any constituent or characteristic of them—that form the rational ultimate end of human action and the sole criterion of social progress: these appear to be truths which have been generally overlooked.

That they are truths—that personal affections and aesthetic enjoyments include *all* the greatest, and *by far* the greatest, goods we can imagine, will, I hope, appear more plainly in the course of that analysis of them, to which I shall now proceed....
