

Homework on §1.1--assigned Fri 8/25 and due Mon 8/28

Consider the premises and possible conclusions from them that are listed below and order the conclusions according to the extent to which they are supported by the premises beginning with any that are entailed by the premises and ending with any that are excluded by (or inconsistent with) the premises.

Don't expect there to be an obviously correct way of doing this. The point of the exercise is not to find the right order but instead to think about why you order the conclusions as you do. Your answer should (i) give your ordering of the conclusions, (ii) indicate any that are entailed or excluded by the premises, and (iii) give one sentence explaining your reasoning (about the order of two sentences or whether one is entailed or excluded) in the case where the right answer seems *least* obvious.

[The word **glub** in the following is intended to be new to you; if you think you already know what it means, you are wrong.]

Premises:

Glubs live all around us

Glubs are furry

Glubs fly

Possible conclusions:

There's a glub in the next room

There are no glubs

There's a glub overhead now

Glubs are animals
